

BB50H

High Speed Semi-Automatic Wire-O Binding Machine

The James Burn BB50H is a high-speed, semi-automatic Wire-O binding/finishing machine that can help your shop increase productivity while allowing for binding of documents and calendars up to 20" wide. With a finishing output of up to 1,200 books per hour*, and with the ability to handle skip binding with or without calendar hangers, the BB50H is a great choice for print and copy shops of many kinds.

Your operator simply places your pre-punched books against the back and side blocks to start the process. The BB50H works with Wire-O and SnakeSkin Wire-O from 1/4" to 1" sizes in both 3:1 and 2:1 pitches, and size changeovers can be completed in between 5-15 minutes*.

The size, pitch, and format changes are easily accomplished electronically using the touch screen. All the operator has to do to use this semi-automatic wire binding machine is place their pre-punched document into the machine and press the foot pedal, which tells the machine to automatically cut, feed, and close the wire around your document.

Specifications:

Item #	04JBBB50
Manufacturer	James Burn
Binding Style	Wire-O
Operating Method	Semi-Automatic
Max Paper Size	20" Long
Max Book Thickness	Up to 7/8" Thick*
Output Speed	1,200 Documents / Hour*
